### DETAILED ACTION

1. This action is responsive to amendment filed 10/07/04.
2. Claims 24, 25, 27, 29, 30 and 42-46 are pending in the application.

### EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Thompson on 23/11/2004.

The application has been amended as follows:

Claim 27, The method as defined in Claim ~~[[26]]~~ 24, wherein: the set of texture maps comprises two texture maps; and each said texture map: corresponds to not more ~~[[that]]~~ than four of the radial directions; and has four color channels each having not more than radial direction encoding for the corresponding largest angle for each vertex between the normal vector and any direct ray of light to the vertex that does not contact any of the bumps on the surface.

Claim 44, The one or more media as recited in claim 42, wherein: the set of texture maps comprises two texture maps; and each said texture map: corresponds to not more ~~[[that]]~~ than four of the radial directions; and has four color channels each having not more than radial direction encoding for the corresponding largest angle for each vertex between the normal vector and any direct ray of light to the vertex that does

not contact any of the bumps on the surface.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

Claims 24 and 42, the prior art does not teach a method for determining shadowing cast onto a bump mapped surface, comprising: defining a horizon map of the surface including for radial directions, the largest angle between the normal vector and any direct ray of light to the vertex; wherein for each vertex, each texture map has color channels, each color channel having encoded therein the largest angle between the normal vector and any direct ray of light to the vertex that does not contact any of the bump maps on the surface.

Claims 29 and 45, the prior art does not teach the perturbed normal vector value at the vertex to obtain cosine; setting a color mask upon the frame buffer, wherein the color mask will not write to the color channels of the texture maps, whereby the ambient low level lighting term previously rendered is preserved; computing the first and second texture effects on each pixel in the frame buffer by a basis map  $B1(s,t)$  of the  $M$  basis maps ( $B_k=1 \dots M(s,t)$ ), and a horizon map,  $\phi1(u,v)$  of the horizon maps; and a basis map  $B2(s,t)$  of the  $M$  basis maps ( $B_k=1 \dots M(s,t)$ ), and a horizon map,  $\phi2(u,v)$  of the horizon maps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
